Equity Funds - Emerging Markets

May 2025As at 30/05/2025

Fund Data

Investment Policy

The Fund management aims to achieve comparatively high dividend yields and high dividend growth in the emerging countries, with risk management being integrated into the investment strategy. The investment universe is among others defined by environmental and social aspects and principles of good corporate governance. The fund is actively managed.

Fund Management's Comment

You can find the Fund management's detailed commentary in DWS Flagship Fund Reporting and on the individual pages of the factsheets.

Fund Management's Comment: DWS Invest ESG Emerging Markets Top Dividend

Equity Funds - Emerging Markets

Data in relation to the fund or the leading unit class.	May 2025	As at 30/05/2025
---	----------	------------------

Performance Review

The stock markets recorded significant gains in May. Rating agency Moody's downgraded the creditworthiness of US Treasuries in light of the strained budget situation. This caused yields on 30-year US and Japanese bonds to rise above 5% and 3%, respectively, but later normalized. The volatility regarding tariffs continued. The geopolitical situation remained tense, with an escalation in the India/Pakistan conflict and ongoing fighting in Ukraine in the Middle East. Despite verbal attacks from the US President, the US Federal Reserve kept interest rates unchanged. The Emerging Markets slightly underperformed the Developed Markets. Taiwan gained the most after substantial gains in its technology stocks, followed by South Korea gained on corporate developments ahead of the presidential election. India inched higher but proved rangebound all month, while Thailand and Turkey underperformed. Information Technology, Industrials, and Financials were the best-performing sectors, whereas Utilities, Real Estate, and Consumer Staples were the worst-performing sectors.

Performance Attribution

The fund outperformed the wider market in May. From a country perspective, the security selection in China, Brazil, South Korea, and Mexico had a positive effect on the performance supported by allocation in India. Whereas the allocation and selection in Taiwan both contributed negatively. From a sector perspective, the positive selection in Financials and Communication Services was supported by positive allocation in Materials, Utilities, and Health Care, which was partly offset by the negative selection and allocation in Information Technology, as well as holding cash. On a single stock level, the positive contributors were KB Financials, Tencent Music Entertainment, Hong Kong Exchanges, and Banco Bradesco, while the negative contributors were Advanced Info Service, Malayan Banking, and Alibaba.

Current Positioning

The fund focuses on high dividend-yield and high dividend-growth companies with moderate pay-out ratios, strong balance sheets and cash flow, stable or expanding business model, and strong management. From a sector perspective, our biggest underweights are in the consumer discretionary, materials, energy, and health care sectors. Our largest overweights are in the financials and communication sectors. On a country level, we are overweight in South Korea, South Africa, Singapore, and Brazil. Our biggest underweights are in China, India, and Saudi Arabia.

Outlook

The geopolitical situation remains a factor of uncertainty for the equity markets due to the war in Ukraine and the escalation of conflicts in the Middle East. The new US administration and the resulting impact on the economic and foreign policy should be closely monitored. Trump 2.0, up until now, is more associated with a rising risk of recession or even stagflation rather than the pro-growth and low-tax narrative many initially celebrated. The relationship between the USA and China remains also tense. Especially the potential implementation of import tariffs on a broad set of products from Emerging countries poses a risk. As inflation growth rates have slowed around the world, further tightening of monetary policy seems unlikely. On the contrary, many of the world's leading central banks have already started cutting interest rates. The emerging markets continue to face major challenges but are likely to remain drivers of the global economy, albeit in the medium term. Short-term fluctuations in emerging markets investments will certainly also be expected in the future.

We remain positively cautious on China, the implementation and effectiveness of recent announced stimulus measures remain to be seen on the backdrop of ongoing problems in the real estate sector and weak consumer demand. On the other hand, we are constructive on macroeconomic developments in India. The valuation for Indian equities remains expensive, but structural growth remains intact.

On a longer-term basis, higher-quality companies should exhibit a performance advantage, and they are particularly well situated now given that many have traded down to compelling valuations. If cyclical improvement unfolds, we believe Emerging Markets could be major beneficiaries in a recurring risk-on environment based on capital inflows and comparatively attractive valuations. Fund management continues to actively seek attractive investment opportunities.

Opportunities

In accordance with the investment policy.

Risks

- The fund invests in equities. Equities are subject to strong price fluctuations and thus also to the risk of price decreases.
- The fund invests in emerging markets. Investing in assets from the emerging markets generally entails a greater risk (potentially including considerable legal, economic and political risks) than investing in assets from the markets of established countries.
- The fund seeks to generate income from dividends, i.e. from expected distributions per equity. If a company distributes a smaller dividend than expected or no dividend at all, this can have a negative impact on the value of equities or derivatives.
- Due to its composition/the techniques used by the Fund management, the investment fund has significantly elevated volatility, i.e. the share price may be subject to significant fluctuations up or down within short periods of time. The share value may fall below the purchase price at which the customer acquired the share at any time.

Investor profile: Risk-tolerant

The Fund is intended for the risk-tolerant investor who, in seeking investments that offer targeted opportunities to maximize returns, can tolerate the unavoidable, and occasionally substantial, fluctuations in the values of speculative investments. The high risks from volatility, as well as high credit risks, make it probable that the fund will lose value from time to time, and expectations of high returns and tolerance of risk are offset by the possibility of incurring significant losses of capital invested.

General information

When the custodian sets the price on the last trading day of the month there can be a difference of up to ten hours between the times at which the fund price and the benchmark are calculated. In the event of strong market movements during this period, this may result in the over- or understatement of the Fund's performance relative to the benchmark at the end of the month (this is referred to as the "pricing effect").

Subscriptions can only be made and units held in accordance with the terms set out in the current version of the sales prospectus, the prospectus and/or the KID (Key Information Document) .

General Risk Warnings

Any investment in units of a collective investment scheme entails or is associated with equity market, bond market, exchange rate, interest rate, credit, volatility and political risks. Each of these risks may appear in connection with other risks. A brief description of some of these risk factors is provided below.

Prospective investors should have previous experience with the financial instruments that are in use in the specified investment policy. Investors should fully understand the risks associated with investments in fund units and only make investment decisions after consulting with their legal, tax, financial or other advisors in regards to (i) the suitability of an investment in units in view of their personal tax and financial position and/or other circumstances; (ii) the information contained in this prospectus; (iii) the investment policy of the collective investment scheme; and (iv) the risks associated with the investment under the planned investment policy presented by the collective investment scheme.

Please note that investments in collective investment schemes entail both opportunities on the upside and risks on the downside. Units of collective investment schemes are securities and as such their value fluctuates with the rise and fall in the value of the underlying assets. The value of the units may accordingly rise above or fall below the purchase price. No guarantee therefore is given that the objectives of the investment policy will be achieved.
Past performance is not necessarily a guide to future returns.

Alpha

A measure of the difference between the risk-adjusted return on an investment and a benchmark. The alpha measures the part of the performance that cannot be explained by market movements or market risk, but rather is derived from the selection of securities within the market. Alpha is a way of measuring the active contribution to performance made by the portfolio manager. It is also a good yardstick to use when comparing several funds. The figure is calculated on a 3-yearly basis.

Average dividend yield

Measures the average dividend amount, based on the current share price. This figure is calculated based on the shares (including ADRs/GDRs - > Depositary receipts) and REITs contained in a fund.

Average market capitalization

Measures the average market capitalization of the shares, REITs and ADRs/GDRs (depositary receipts) contained in a fund. The market capitalization represents the total market value of a company as determined by multiplying the number of shares issued by the current share price.

Beta factor

A measure of sensitivity - given as the average percentage change in the price of a fund when the market (benchmark) rises or falls by 1%. A value over (under) 1 means that on average the fund exhibits more (less) volatility than the benchmark. The figure is calculated on a 3-yearly basis.

Correlation coefficient

Describes the degree to which two values (fund versus benchmark) move in the same direction. The value of the correlation coefficient is between -1 and +1. A correlation of +1 means that the fund generally moves in the same direction as the benchmark, while -1 indicates that the fund generally moves in the opposite direction. A correlation of 0 means that there is no relation between the price movements of the fund and the benchmark. The figure is calculated on a 3-yearly basis.

Coupon

The coupon is the portfolio's average weighted coupon.

Duration (in years/in months)

A measure of the sensitivity of an investment to changes in interest rates. Duration, which was developed by Frederick Macaulay, is the average period for which invested capital is committed. Because of the interest payable over time on the invested capital, duration is shorter than -> maturity. This version of duration is used in DWS Top Reporting and refers to invested assets (without "Cash and other holdings").

Information ratio

The information ratio measures the difference between the annualized average return of the fund and that of the benchmark, divided by the Tracking error. The higher this value is, the more the investor compensated for the risk in the fund. The figure is calculated on a 3-yearly basis.

Maximum drawdown

The maximum drawdown is the largest percentage drop in value in a given period of time. It measures the amount the fund falls from its highest point to its lowest point in the selected timeframe. The figure is calculated on a 3-yearly basis.

Modified duration (in years/in months)

Serves as a measure of interest-rate sensitivity. Modified duration indicates the percentage change in price of a bond (in a portfolio) when the market interest rate changes by 1%. In order to calculate the percentage change in the bond price, the modified duration of the bond is multiplied by the percentage change in the interest rate. This figure helps investors assess the risks and opportunities of a bond at a glance.

Sharpe ratio

A measure of risk developed by William F. Sharpe, defined as the excess return on an investment over that of a risk-free investment in relation to the risk of the investment. The higher the Sharpe ratio, the higher the return the investor receives for the risk the investment carries (expressed in volatility). The Sharpe ratio can be used to compare multiple funds. The figure is calculated on a 3-yearly basis.

Tracking error

The tracking error is the standard deviation of the yield differential between a fund and its benchmark. This makes it a measure of how well the fund manager tracks the benchmark. The figure is calculated on a 3-yearly basis.

VaR (Value at Risk)

A measure of risk that indicates the maximum fund losses with a given probability for a given period of time (holding period). VaR is calculated on the basis of the daily prices of the individual securities contained in the portfolio for a year.

Weighted Average Life

The weighted average life of the times of the principal repayments of a liability, i.e. a bond. Refers to invested fund assets (without "Cash and other holdings").

Yield

The yield is the annual return on a capital investment, measured as the actual interest earned (effective yield) on the capital invested. It is based on the fund's income (e.g., interest, dividends, realized capital gains) and change in the price of the assets held in the fund. The yield of a fund is

derived from the invested assets (without "Cash and other holdings") and is presented as a "gross" figure, i.e., before the deduction of total expenses/fee.

Volatility

Volatility expresses the degree to which the yield on an investment (the price performance of a fund, for example) varies from a mean value in a specific period of time. This makes it a measure of fund risk. The greater the variation from the mean, the higher the volatility. Knowing the volatility allows investors to assess how uncertain the return potential of an investment is. The figure is calculated on a 3-yearly basis.
