As at 30/05/2025

Fund Data

Investment Policy

The fund invests in equities of issuers with a high market capitalization and who have their headquarters in a member state of the European Economic and Monetary Union. Around 40 to 60 stocks are included in the portfolio that Fund management considers to have above-average earnings potential. Depending on the market situation, the management may deviate from the above-mentioned diversification target. The investment universe is among others defined by environmental and social aspects and principles of good corporate governance. The fund is actively managed.

Fund Management's Comment

You can find the Fund management's detailed commentary in DWS Flagship Fund Reporting and on the individual pages of the factsheets.

(1) The Total Expense Ratio (TER) generally includes all expense items charged to the Fund apart from transaction costs and performance fees. If the Fund invests portions of its assets in target funds, the costs of the respective target funds will also be taken into account. The Fund incurred the total expenses listed here in its last financial year, which ended on 31/12/2024. They are subject to change from year to year.

# Fund Management's Comment: DWS Invest ESG Top Euroland

Equity Funds - Europe

Data in relation to the fund or the leading unit class.	May 2025	As at 30/05/2025
---	----------	------------------

## Performance Review

The European equity market recorded significant price increases in May. The EURO STOXX 50 rose by 5.06%.

In terms of sectors, the technology sector and industrial stocks posted the strongest gains. The financial sector also performed above average.

By contrast, stocks in more defensive sectors such as non-cyclical consumer goods and healthcare recorded a weaker trend in the generally favorable market environment. The persistently low oil price also weighed on the energy sector.

DWS Invest ESG Top Euroland also recorded significant price gains in May, rising by 8.16%.

## Performance Attribution

The overall better performance compared to the EURO STOXX 50 in May was primarily the result of positive individual stock selection. Sector allocation was also slightly positive.

On the allocation side, the underweight positions in energy and consumer discretionary stocks and the overweight position in technology stocks had a particularly positive impact. On the other hand, the underweighting in the industrial sector was negative.

At the individual stock level, the overweight positions in Dutch bank ABN Amro and the positions in German online platform Scout24 had a particularly positive impact. In addition, the French pharmaceutical company Sanofi also performed above average.

However, the higher weights of German fashion retailer Zalando and German insurance group Allianz had a negative impact.

## Current Positioning

The DWS Invest ESG Top Euroland Fund is almost fully invested at around 99% as of May.

The communications, financial and technology sectors are the most overweighted. In these areas, the Fund management is focusing on structurally strong companies that are expected to achieve above-average profit growth primarily due to their positioning or their sales markets. Due to its relatively favorable valuation and the need for Europe to achieve energy transition and energy independence, the utilities sector has recently been overweighted. In the healthcare and basic materials sectors, the Fund management focuses on individual companies with interesting business models. These sectors are roughly neutral in terms of their weighting compared to the benchmark. The largest underweights include companies in the energy sector, as well as defensive and consumer discretionary stocks and stocks from the industrial sectors. In the case of defensive consumer stocks, the Fund management sees less price potential than in other areas, partly due to the relatively high valuation in relation to their earnings growth. The energy sector is less attractive for ESG reasons.

## Outlook

After a correction in early April, mainly due to the massive tariff announcements by US President Trump, European equity markets recovered significantly in May. This was mainly due to the fact that US President Trump reached the limits of his tariff demands in some areas and consequently showed himself willing to negotiate on certain issues.

On the whole, the base scenario with hopes for further possible cuts in key interest rates remains intact for the European equity markets this year. Positive factors influencing the equity markets in May were primarily the easing of the US trade dispute with a surprising trade deal between the US and China. The trade agreement between the US and the UK and the fifth consecutive rise in the Ifo index also provided some relief. Furthermore, the significant growth in industrial production in China had a supportive effect.

Trump's temporary threat of a 50% import tariff on goods from the EU and Fed Chairman Powell's assessment that the US Federal Reserve is in no hurry to cut key interest rates further only unsettled the markets in the short term.

The development of the equity markets in the coming weeks will be largely determined by the tension between a still tense geopolitical situation and the increased probability of a US recession on the one hand, but also the optimism with regard to still possible interest rate cuts and an economic recovery on the other.

### Opportunities

In accordance with the investment policy.

### Risks

- The fund invests its assets in selected regions or sectors. This increases the risk that the fund may be negatively influenced by the economic and political conditions in the respective regions or sectors.
- The fund invests in equities. Equities are subject to strong price fluctuations and thus also to the risk of price decreases.
- Due to its composition/the techniques used by the Fund management, the investment fund has elevated volatility, i.e. the share price may be subject to significant fluctuations up or down within short periods of time. The share value may fall below the purchase price at which the customer acquired the share at any time.

Investor profile: Growth-oriented

The Fund is intended for the growth-oriented investor seeking returns higher than those from capital market interest rates, with capital growth generated primarily through opportunities in the equity and currency markets. Security and liquidity are subordinate to potential high returns. This entails higher equity, interest rate and currency risks, as well as default risks, all of which can result in a loss of capital.

## General information

When the custodian sets the price on the last trading day of the month there can be a difference of up to ten hours between the times at which the fund price and the benchmark are calculated. In the event of strong market movements during this period, this may result in the over- or understatement of the Fund's performance relative to the benchmark at the end of the month (this is referred to as the "pricing effect").

Subscriptions can only be made and units held in accordance with the terms set out in the current version of the sales prospectus, the prospectus and/or the KID (Key Information Document) .

## General Risk Warnings

Any investment in units of a collective investment scheme entails or is associated with equity market, bond market, exchange rate, interest rate, credit, volatility and political risks. Each of these risks may appear in connection with other risks. A brief description of some of these risk factors is provided below.

Prospective investors should have previous experience with the financial instruments that are in use in the specified investment policy. Investors should fully understand the risks associated with investments in fund units and only make investment decisions after consulting with their legal, tax, financial or other advisors in regards to (i) the suitability of an investment in units in view of their personal tax and financial position and/or other circumstances; (ii) the information contained in this prospectus; (iii) the investment policy of the collective investment scheme; and (iv) the risks associated with the investment under the planned investment policy presented by the collective investment scheme.

Please note that investments in collective investment schemes entail both opportunities on the upside and risks on the downside. Units of collective investment schemes are securities and as such their value fluctuates with the rise and fall in the value of the underlying assets. The value of the units may accordingly rise above or fall below the purchase price. No guarantee therefore is given that the objectives of the investment policy will be achieved. Past performance is not necessarily a guide to future returns.

## Alpha

A measure of the difference between the risk-adjusted return on an investment and a benchmark. The alpha measures the part of the performance that cannot be explained by market movements or market risk, but rather is derived from the selection of securities within the market. Alpha is a way of measuring the active contribution to performance made by the portfolio manager. It is also a good yardstick to use when comparing several funds. The figure is calculated on a 3-yearly basis.

## Average dividend yield

Measures the average dividend amount, based on the current share price. This figure is calculated based on the shares (including ADRs/GDRs - > Depositary receipts) and REITs contained in a fund.

## Average market capitalization

Measures the average market capitalization of the shares, REITs and ADRs/GDRs (depositary receipts) contained in a fund. The market capitalization represents the total market value of a company as determined by multiplying the number of shares issued by the current share price.

## Beta factor

A measure of sensitivity - given as the average percentage change in the price of a fund when the market (benchmark) rises or falls by 1%. A value over (under) 1 means that on average the fund exhibits more (less) volatility than the benchmark. The figure is calculated on a 3-yearly basis.

## Correlation coefficient

Describes the degree to which two values (fund versus benchmark) move in the same direction. The value of the correlation coefficient is between -1 and +1. A correlation of +1 means that the fund generally moves in the same direction as the benchmark, while -1 indicates that the fund generally moves in the opposite direction. A correlation of 0 means that there is no relation between the price movements of the fund and the benchmark. The figure is calculated on a 3-yearly basis.

## Coupon

The coupon is the portfolio's average weighted coupon.

## Duration (in years/in months)

A measure of the sensitivity of an investment to changes in interest rates. Duration, which was developed by Frederick Macaulay, is the average period for which invested capital is committed. Because of the interest payable over time on the invested capital, duration is shorter than -> maturity. This version of duration is used in DWS Top Reporting and refers to invested assets (without "Cash and other holdings").

## Information ratio

The information ratio measures the difference between the annualized average return of the fund and that of the benchmark, divided by the Tracking error. The higher this value is, the more the investor compensated for the risk in the fund. The figure is calculated on a 3-yearly basis.

## Maximum drawdown

The maximum drawdown is the largest percentage drop in value in a given period of time. It measures the amount the fund falls from its highest point to its lowest point in the selected timeframe. The figure is calculated on a 3-yearly basis.

## Modified duration (in years/in months)

Serves as a measure of interest-rate sensitivity. Modified duration indicates the percentage change in price of a bond (in a portfolio) when the market interest rate changes by 1%. In order to calculate the percentage change in the bond price, the modified duration of the bond is multiplied by the percentage change in the interest rate. This figure helps investors assess the risks and opportunities of a bond at a glance.

## Sharpe ratio

A measure of risk developed by William F. Sharpe, defined as the excess return on an investment over that of a risk-free investment in relation to the risk of the investment. The higher the Sharpe ratio, the higher the return the investor receives for the risk the investment carries (expressed in volatility). The Sharpe ratio can be used to compare multiple funds. The figure is calculated on a 3-yearly basis.

## Tracking error

The tracking error is the standard deviation of the yield differential between a fund and its benchmark. This makes it a measure of how well the fund manager tracks the benchmark. The figure is calculated on a 3-yearly basis.

## VaR (Value at Risk)

A measure of risk that indicates the maximum fund losses with a given probability for a given period of time (holding period). VaR is calculated on the basis of the daily prices of the individual securities contained in the portfolio for a year.

## Weighted Average Life

The weighted average life of the times of the principal repayments of a liability, i.e. a bond. Refers to invested fund assets (without "Cash and other holdings").

## Yield

The yield is the annual return on a capital investment, measured as the actual interest earned (effective yield) on the capital invested. It is based on the fund's income (e.g., interest, dividends, realized capital gains) and change in the price of the assets held in the fund. The yield of a fund is

derived from the invested assets (without "Cash and other holdings") and is presented as a "gross" figure, i.e., before the deduction of total expenses/fee.

## Volatility

Volatility expresses the degree to which the yield on an investment (the price performance of a fund, for example) varies from a mean value in a specific period of time. This makes it a measure of fund risk. The greater the variation from the mean, the higher the volatility. Knowing the volatility allows investors to assess how uncertain the return potential of an investment is. The figure is calculated on a 3-yearly basis.
