Equity Funds - Emerging Markets

April 2025

As at 30/04/2025

Fund Data

Investment Policy

The Fund management aims to achieve comparatively high dividend yields and high dividend growth in the emerging countries, with risk management being integrated into the investment strategy. The investment universe is among others defined by environmental and social aspects and principles of good corporate governance. The fund is actively managed.

Fund Management's Comment

You can find the Fund management's detailed commentary in DWS Flagship Fund Reporting and on the individual pages of the factsheets.

Performance

Performance (in %) - Share Class LC(EUR)

Calculation of performance is based on the time-weighted return and excludes front-end fees. Individual costs such as fees, commissions and other charges have not been included in this presentation and would have an adverse impact on returns if they were included. Past performance is not a reliable indicator of future returns.

Cumulative performance (in %) - share class LC(EUR)

(1) The Total Expense Ratio (TER) generally includes all expense items charged to the Fund apart from transaction costs and performance fees. If the Fund invests portions of its assets in target funds, the costs of the respective target funds will also be taken into account. The Fund incurred the total expenses listed here in its last financial year, which ended on 31/12/2024. They are subject to change from year to year.

Important notice: Distribution agents such as banks or other investment service providers may report costs or expense ratios to interested investors that may differ from and exceed the costs described here. This may be due to new regulatory requirements for the calculation and reporting of costs by these distribution agents, in particular as a result of the implementation of Directive 2014/65/EU (Markets in Financial Instruments Directive - "MiFID2 Directive") from January 3, 2018.

Fund Management's Comment: DWS Invest ESG Emerging Markets Top Dividend Equity Funds - Emerging Markets

| | | |
|---|------------|------------------|
| Data in relation to the fund or the leading unit class. | April 2025 | As at 30/04/2025 |
|---|------------|------------------|

Performance Review

The month of April started with a shock to the global trade order, when President Trump announced global tariffs on “Liberation Day”. Subsequently, global stock markets experienced the sharpest drop since the corona crisis. There was a flight out of US assets and a large bond market sell-off accompanied by a massive depreciation of the USD against other important currencies. This stopped with the announcement to delay the tariff implementation by 90 days – with the exception of China where tariffs went up to 145%. By the end of the month, global stock markets calmed down and recovered most of their losses due to hopes for a relaxation of potential tariffs. In April, Emerging Markets was down by 3.5% (in EUR), outperforming the Developed Markets moderately. Equity market in most of EM countries had negative performance. China was the largest drag driven by profit-taking within the Consumer Discretionary stocks, followed by Information Technology sector in Taiwan. On the contrary, Mexico outperformed with positive performance.

Performance Attribution

The fund outperformed the wider market in April. From a country perspective, the positioning in China, Mexico, Brazil and India had a positive effect on the performance, while the positioning in Taiwan, Hong Kong and Singapore contributed negatively. From a sector perspective, the positive selection in Financials and Communication Services was offset by the negative allocation in Consumer Discretionary, as well as negative selection in Information Technology. On a single stock level, the positive contributors were KB Financials, Grupo Financiero Banorte, and Singapore Telecom, while the negative contributors were DBS, BYD, and Techtronic Industries.

Current Positioning

The fund focuses on high dividend-yield and high dividend-growth companies with moderate pay-out ratios, strong balance sheets and cash flow, stable or expanding business model, and strong management. From a sector perspective, our biggest underweights are in the consumer discretionary, materials, energy, and health care sectors. Our largest overweights are in the financials and communication sectors. On a country level, we are overweight in Singapore, Hong Kong, South Korea, Mexico Brazil. Our biggest underweights are in India, China and Saudi Arabia.

Outlook

The geopolitical situation remains a factor of uncertainty for the equity markets due to the war in Ukraine, the escalation of conflicts in the Middle East, and US trade policy with import tariffs on a broad set of products from Emerging countries. The relationship between the USA and China remains also tense. Turbulence in the Chinese real estate market and the slowdown in economic growth have added another risk factor that could impact global economic development. As inflation growth rates have slowed around the world, further tightening of monetary policy seems unlikely. On the contrary, many of the world's leading central banks have already started cutting interest rates. The impact of the new US administration on the global trade is being closely monitored. We expect higher market volatility. The emerging markets continue to face major challenges but are likely to remain drivers of the global economy, albeit in the medium term. Short-term fluctuations in emerging markets investments will certainly also be expected in the future. We remain positively cautious on China, the implementation and effectiveness of recent announced stimulus measures remain to be seen on the backdrop of ongoing problems in the real estate sector and weak consumer demand. On the other hand, we are constructive on macroeconomic developments in India. The valuation for Indian equities remains expensive, but structural growth remains intact. On a longer-term basis, higher-quality companies should exhibit a performance advantage, and they are particularly well situated now given that many have traded down to compelling valuations. If cyclical improvement unfolds, we believe Emerging Markets could be major beneficiaries in a recurring risk-on environment based on capital inflows and comparatively attractive valuations. Fund management continues to actively seek attractive investment opportunities.

Factsheet: DWS Invest ESG Emerging Markets Top Dividend

Equity Funds - Emerging Markets

Opportunities

In accordance with the investment policy.

Risks

- The fund invests in equities. Equities are subject to strong price fluctuations and thus also to the risk of price decreases.
- The fund invests in emerging markets. Investing in assets from the emerging markets generally entails a greater risk (potentially including considerable legal, economic and political risks) than investing in assets from the markets of established countries.
- The fund seeks to generate income from dividends, i.e. from expected distributions per equity. If a company distributes a smaller dividend than expected or no dividend at all, this can have a negative impact on the value of equities or derivatives.
- Due to its composition/the techniques used by the Fund management, the investment fund has significantly elevated volatility, i.e. the share price may be subject to significant fluctuations up or down within short periods of time. The share value may fall below the purchase price at which the customer acquired the share at any time.

Important note on the investor profile:

Investor profile: Risk-tolerant

The sub-fund is designed for risk-tolerant investors who seek high-return forms of investment and therefore accept large fluctuations in value as well as very high risks. The strong price fluctuations and high creditworthiness risks result in temporary or permanent declines in the value of units. The investor's high income expectations and risk appetite are offset by the possibility of heavy losses of the invested capital, up to the total amount invested. The investor is willing and able to bear such a financial loss, and does not prioritize capital preservation.

The Company provides additional information relating to the profile of the typical investor or target customer group for this financial product to distribution agents and distribution partners. If the investor is advised on the acquisition of units by the Company's distribution agents or distribution partners, or if they act as brokers in the purchase of units, they may also provide the investor additional information that also relates to the profile of the typical investor.

Supplementary information on the target market and product costs resulting from the implementation of the MiFID2 Directive and made available to distribution agents by the capital management company can be obtained in electronic form from the Company's website at www.dws.com.

Important Notice

When the custodian sets the price on the last trading day of the month there can be a difference of up to ten hours between the times at which the fund price and the benchmark are calculated. In the event of strong market movements during this period, this may result in the over- or understatement of the Fund's performance relative to the benchmark at the end of the month (this is referred to as the "pricing effect").

This document is intended as marketing communication. Please read the fund prospectus and KID before making a final investment decision.

DWS is the brand name under which DWS Group GmbH & Co. KGaA and its subsidiaries do business. Clients will be provided DWS products or services by one or more legal entities that will be identified to them in relevant documentation.

This document does not constitute investment advice.

Complete information on the Fund, including all risks and costs, can be found in the relevant current prospectus. Together with the relevant key information document, these constitute the only binding sales documents for the Fund. Investors can obtain these documents, together with regulatory information, as well as the latest constitutional documents for the Fund [in German] from DWS Investment GmbH, Mainzer Landstraße 11-17, 60329 Frankfurt am Main and, in case of Luxembourg domiciled Sub-Funds, from DWS Investment S.A., 2, Boulevard Konrad Adenauer, L-1115 Luxembourg, in printed form free of charge, or for active products available for download from Germany: www.dws.de or from different locations in respective language from <https://funds.dws.com> and for passive products under www.etf.dws.com.

DWS Investment GmbH, 2025

Alpha

A measure of the difference between the risk-adjusted return on an investment and a benchmark. The alpha measures the part of the performance that cannot be explained by market movements or market risk, but rather is derived from the selection of securities within the market. Alpha is a way of measuring the active contribution to performance made by the portfolio manager. It is also a good yardstick to use when comparing several funds. The figure is calculated on a 3-yearly basis.

Average dividend yield

Measures the average dividend amount, based on the current share price. This figure is calculated based on the shares (including ADRs/GDRs - > Depositary receipts) and REITs contained in a fund.

Average market capitalization

Measures the average market capitalization of the shares, REITs and ADRs/GDRs (depositary receipts) contained in a fund. The market capitalization represents the total market value of a company as determined by multiplying the number of shares issued by the current share price.

Beta factor

A measure of sensitivity - given as the average percentage change in the price of a fund when the market (benchmark) rises or falls by 1%. A value over (under) 1 means that on average the fund exhibits more (less) volatility than the benchmark. The figure is calculated on a 3-yearly basis.

Correlation coefficient

Describes the degree to which two values (fund versus benchmark) move in the same direction. The value of the correlation coefficient is between -1 and +1. A correlation of +1 means that the fund generally moves in the same direction as the benchmark, while -1 indicates that the fund generally moves in the opposite direction. A correlation of 0 means that there is no relation between the price movements of the fund and the benchmark. The figure is calculated on a 3-yearly basis.

Coupon

The coupon is the portfolio's average weighted coupon.

Duration (in years/in months)

A measure of the sensitivity of an investment to changes in interest rates. Duration, which was developed by Frederick Macaulay, is the average period for which invested capital is committed. Because of the interest payable over time on the invested capital, duration is shorter than -> maturity. This version of duration is used in DWS Top Reporting and refers to invested assets (without "Cash and other holdings").

Information ratio

The information ratio measures the difference between the annualized average return of the fund and that of the benchmark, divided by the Tracking error. The higher this value is, the more the investor compensated for the risk in the fund. The figure is calculated on a 3-yearly basis.

Maximum drawdown

The maximum drawdown is the largest percentage drop in value in a given period of time. It measures the amount the fund falls from its highest point to its lowest point in the selected timeframe. The figure is calculated on a 3-yearly basis.

Modified duration (in years/in months)

Serves as a measure of interest-rate sensitivity. Modified duration indicates the percentage change in price of a bond (in a portfolio) when the market interest rate changes by 1%. In order to calculate the percentage change in the bond price, the modified duration of the bond is multiplied by the percentage change in the interest rate. This figure helps investors assess the risks and opportunities of a bond at a glance.

Sharpe ratio

A measure of risk developed by William F. Sharpe, defined as the excess return on an investment over that of a risk-free investment in relation to the risk of the investment. The higher the Sharpe ratio, the higher the return the investor receives for the risk the investment carries (expressed in volatility). The Sharpe ratio can be used to compare multiple funds. The figure is calculated on a 3-yearly basis.

Tracking error

The tracking error is the standard deviation of the yield differential between a fund and its benchmark. This makes it a measure of how well the fund manager tracks the benchmark. The figure is calculated on a 3-yearly basis.

VaR (Value at Risk)

A measure of risk that indicates the maximum fund losses with a given probability for a given period of time (holding period). VaR is calculated on the basis of the daily prices of the individual securities contained in the portfolio for a year.

Weighted Average Life

The weighted average life of the times of the principal repayments of a liability, i.e. a bond. Refers to invested fund assets (without "Cash and other holdings").

Yield

The yield is the annual return on a capital investment, measured as the actual interest earned (effective yield) on the capital invested. It is based on the fund's income (e.g., interest, dividends, realized capital gains) and change in the price of the assets held in the fund. The yield of a fund is

derived from the invested assets (without "Cash and other holdings") and is presented as a "gross" figure, i.e., before the deduction of total expenses/fee.

Volatility

Volatility expresses the degree to which the yield on an investment (the price performance of a fund, for example) varies from a mean value in a specific period of time. This makes it a measure of fund risk. The greater the variation from the mean, the higher the volatility. Knowing the volatility allows investors to assess how uncertain the return potential of an investment is. The figure is calculated on a 3-yearly basis.
