| 04/2024 - 04/2025 | 4.7 |

Fund

Calculation of performance is based on the time-weighted return and excludes front-end fees. Individual costs such as fees, commissions and other charges have not been included in this presentation and would have an adverse impact on returns if they were included. Past performance is not a reliable indicator of future returns.

(1) The Total Expense Ratio (TER) generally includes all expense items charged to the Fund apart from transaction costs and performance fees. If the Fund invests portions of its assets in target funds, the costs of the respective target funds will also be taken into account. The Fund incurred the total expenses listed here in its last financial year, which ended on 31/12/2024. They are subject to change from year to year.

Important notice: Distribution agents such as banks or other investment service providers may report costs or expense ratios to interested investors that may differ from and exceed the costs described here. This may be due to new regulatory requirements for the calculation and reporting of costs by these distribution agents, in particular as a result of the implementation of Directive 2014/65/EU (Markets in Financial Instruments Directive - "MiFID2 Directive") from January 3, 2018.

Fund Management's Comment: DWS Invest Top Dividend

Equity Funds - Global

| | | |
|---|------------|------------------|
| Data in relation to the fund or the leading unit class. | April 2025 | As at 30/04/2025 |
|---|------------|------------------|

Performance Review

April began with a shock to the global trade order when President Trump announced global tariffs on “Liberation Day”, with a base tariff of 10% on all US imports as well as significantly higher tariffs for partners deemed to be “bad actors”. Stock markets subsequently experienced their sharpest falls since the Covid crisis. After a flight from US assets and a sell-off in the bond market – highlighted by the significant depreciation of the dollar against other major currencies – the plans were postponed for 90 days. The volatility index jumped significantly and was close to historic highs. In Europe, the ECB cut its key interest rate by 25 basis points for the seventh time. Towards the end of the month, the markets recovered noticeably and made up for the monthly losses. The price recovery was supported by hopes of a possible easing of the trade conflict, better than feared quarterly results and solid US labor market figures. The volatility index normalized to some extent and interest rates on long-term government bonds also lost some of their rise. Due to the uncertainty, gold prices ended the month higher by 5.29%. Accordingly, oil prices were down by 19.59%, copper by 9.29% and iron ore by 4.79%. The Dollar index was down 4.55%.

In April, the strongest sectors were Consumer Staples and Utilities, while Energy and Health Care underperformed. Our defensive strategy DWS Invest Top Dividend underperformed the broad equity market (MSCI World-Index: no official benchmark, for comparison purpose only). During April, the DWS Invest Top Dividend was down 4.68%.

Performance Attribution

Top 5 single stock contributions came from Agnico Eagle, Vinci, AXA, E.ON and Nutrien.

Agnico Eagle: Performance was driven by rising gold prices.
Vinci: The company is recovering from French macro risks. The strong performance was also driven by solid results for FY24 and 1Q/25 and a more resilient business model compared to other industrials companies in case of a slowdown or a recession.
Nutrien: Positive performance was driven by continued price momentum in fertilizer markets.

Bottom 5: On a single stock level Schlumberger, Shell, UnitedHealth, TotalEnergies and Abbvie lagged during the month.

Schlumberger/Shell/TotalEnergies: Companies from the energy sector ended the month lower due to a drop in oil prices driven by the risk of lower global demand because of tariffs and the risk of higher OPEC+ supply.
UnitedHealth: The company cut its FY25 EPS outlook by 12% citing elevated and higher than expected medical costs in its Medicare Advantage book of business and operational challenges in its provider unit Optum.

On a sector level, Materials contributed positively to the overall performance of the fund, while Health Care and Energy contributed negatively.

Current Positioning

No major portfolio changes were implemented in the past month. The portfolio management team reduced the weighting in the Information Technology and Industrials sector. In return, the fund management team increased their position in the Materials and Consumer Staples sector. Currently, companies of the Financials and Health Care sector have the highest weighting in the fund of roughly 13 to 20 percent, followed by equities from the sectors Energy and Materials. The fund has the lowest weightings in the sectors Consumer Discretionary and Communication Services. There were hardly any changes on the country level in the past months: US equities still represent the largest stake with about 30 percent, followed by a high proportion in Germany and France. The number of stocks currently stands at around 64. The investment level is currently around 92 percent.

Outlook

The economic outlook for this year remains uncertain given the mixed feedback from macroeconomic data. Personal consumption trends remain healthy and supportive for economic growth which is backed by strong data from the labor market. In contrast, data on corporate investment levels and manufacturing activity show a more muted picture. The mixed economic landscape creates a difficult setup for central banks to adequately calibrate the level of policy rates. We expect less interest cuts going forward compared to twelve months ago since the economy is holding up better than expected at the time. Earnings growth continued to be in the high-single digit territory for global equity indices throughout the past year. However, this has been dominated by the U.S. - especially by a few large technology companies. We expect the trend of positive earnings growth to continue but to broaden across sectors and themes. While the investment theme of Artificial Intelligence should remain front and center, valuations for broad global equity indices, which are dominated by US companies, have priced in a decent amount of optimism. Equity markets outside of the United States offer lower valuation levels and accordingly a more meaningful dividend return.

Higher valuations confirm our expectation of more moderate equity returns over the medium to long term. We consequently remain valuation conscious in our stock selection and emphasize the focus on sound balance sheets, high free cash flow and dividend sustainability. Further, we strongly believe that the importance of dividend distributions for the total return increases further and expect the contribution of dividends to the return of the investment to be above historic averages.

Opportunities

In accordance with the investment policy.

Risks

- The fund invests in equities. Equities are subject to strong price fluctuations and thus also to the risk of price decreases.
- The fund seeks to generate income from dividends, i.e. from expected distributions per equity. If a company distributes a smaller dividend than expected or no dividend at all, this can have a negative impact on the value of equities or derivatives.
- Due to its composition/the techniques used by the Fund management, the investment fund has elevated volatility, i.e. the share price may be subject to significant fluctuations up or down within short periods of time. The share value may fall below the purchase price at which the customer acquired the share at any time.

Important note on the investor profile:

Investor profile: Growth-oriented

The sub-fund is designed for growth-oriented investors who wish to achieve capital appreciation primarily through equity gains and exchange rate movements. Expected earnings are offset by high equity, interest rate and currency risks as well as creditworthiness risks and the possibility of heavy losses of the invested capital, up to the total amount invested. The investor is willing and able to bear such a financial loss, and does not prioritize capital preservation.

The Company provides additional information relating to the profile of the typical investor or target customer group for this financial product to distribution agents and distribution partners. If the investor is advised on the acquisition of units by the Company's distribution agents or distribution partners, or if they act as brokers in the purchase of units, they may also provide the investor additional information that also relates to the profile of the typical investor.

Supplementary information on the target market and product costs resulting from the implementation of the MiFID2 Directive and made available to distribution agents by the capital management company can be obtained in electronic form from the Company's website at www.dws.com.

Important Notice

When the custodian sets the price on the last trading day of the month there can be a difference of up to ten hours between the times at which the fund price and the benchmark are calculated. In the event of strong market movements during this period, this may result in the over- or understatement of the Fund's performance relative to the benchmark at the end of the month (this is referred to as the "pricing effect").

This document is intended as marketing communication. Please read the fund prospectus and KID before making a final investment decision.

DWS is the brand name under which DWS Group GmbH & Co. KGaA and its subsidiaries do business. Clients will be provided DWS products or services by one or more legal entities that will be identified to them in relevant documentation.

This document does not constitute investment advice.

Complete information on the Fund, including all risks and costs, can be found in the relevant current prospectus. DWS Investment GmbH, 2025

Alpha

A measure of the difference between the risk-adjusted return on an investment and a benchmark. The alpha measures the part of the performance that cannot be explained by market movements or market risk, but rather is derived from the selection of securities within the market. Alpha is a way of measuring the active contribution to performance made by the portfolio manager. It is also a good yardstick to use when comparing several funds. The figure is calculated on a 3-yearly basis.

Average dividend yield

Measures the average dividend amount, based on the current share price. This figure is calculated based on the shares (including ADRs/GDRs - > Depositary receipts) and REITs contained in a fund.

Average market capitalization

Measures the average market capitalization of the shares, REITs and ADRs/GDRs (depositary receipts) contained in a fund. The market capitalization represents the total market value of a company as determined by multiplying the number of shares issued by the current share price.

Beta factor

A measure of sensitivity - given as the average percentage change in the price of a fund when the market (benchmark) rises or falls by 1%. A value over (under) 1 means that on average the fund exhibits more (less) volatility than the benchmark. The figure is calculated on a 3-yearly basis.

Correlation coefficient

Describes the degree to which two values (fund versus benchmark) move in the same direction. The value of the correlation coefficient is between -1 and +1. A correlation of +1 means that the fund generally moves in the same direction as the benchmark, while -1 indicates that the fund generally moves in the opposite direction. A correlation of 0 means that there is no relation between the price movements of the fund and the benchmark. The figure is calculated on a 3-yearly basis.

Coupon

The coupon is the portfolio's average weighted coupon.

Duration (in years/in months)

A measure of the sensitivity of an investment to changes in interest rates. Duration, which was developed by Frederick Macaulay, is the average period for which invested capital is committed. Because of the interest payable over time on the invested capital, duration is shorter than -> maturity. This version of duration is used in DWS Top Reporting and refers to invested assets (without "Cash and other holdings").

Information ratio

The information ratio measures the difference between the annualized average return of the fund and that of the benchmark, divided by the Tracking error. The higher this value is, the more the investor compensated for the risk in the fund. The figure is calculated on a 3-yearly basis.

Maximum drawdown

The maximum drawdown is the largest percentage drop in value in a given period of time. It measures the amount the fund falls from its highest point to its lowest point in the selected timeframe. The figure is calculated on a 3-yearly basis.

Modified duration (in years/in months)

Serves as a measure of interest-rate sensitivity. Modified duration indicates the percentage change in price of a bond (in a portfolio) when the market interest rate changes by 1%. In order to calculate the percentage change in the bond price, the modified duration of the bond is multiplied by the percentage change in the interest rate. This figure helps investors assess the risks and opportunities of a bond at a glance.

Sharpe ratio

A measure of risk developed by William F. Sharpe, defined as the excess return on an investment over that of a risk-free investment in relation to the risk of the investment. The higher the Sharpe ratio, the higher the return the investor receives for the risk the investment carries (expressed in volatility). The Sharpe ratio can be used to compare multiple funds. The figure is calculated on a 3-yearly basis.

Tracking error

The tracking error is the standard deviation of the yield differential between a fund and its benchmark. This makes it a measure of how well the fund manager tracks the benchmark. The figure is calculated on a 3-yearly basis.

VaR (Value at Risk)

A measure of risk that indicates the maximum fund losses with a given probability for a given period of time (holding period). VaR is calculated on the basis of the daily prices of the individual securities contained in the portfolio for a year.

Weighted Average Life

The weighted average life of the times of the principal repayments of a liability, i.e. a bond. Refers to invested fund assets (without "Cash and other holdings").

Yield

The yield is the annual return on a capital investment, measured as the actual interest earned (effective yield) on the capital invested. It is based on the fund's income (e.g., interest, dividends, realized capital gains) and change in the price of the assets held in the fund. The yield of a fund is

derived from the invested assets (without "Cash and other holdings") and is presented as a "gross" figure, i.e., before the deduction of total expenses/fee.

Volatility

Volatility expresses the degree to which the yield on an investment (the price performance of a fund, for example) varies from a mean value in a specific period of time. This makes it a measure of fund risk. The greater the variation from the mean, the higher the volatility. Knowing the volatility allows investors to assess how uncertain the return potential of an investment is. The figure is calculated on a 3-yearly basis.
