(1) The Total Expense Ratio (TER) generally includes all expense items charged to the Fund apart from transaction costs and performance fees. If the Fund invests portions of its assets in target funds, the costs of the respective target funds will also be taken into account. The Fund incurred the total expenses listed here in its last financial year, which ended on 30/09/2024. They are subject to change from year to year.

Important notice: Distribution agents such as banks or other investment service providers may report costs or expense ratios to interested investors that may differ from and exceed the costs described here. This may be due to new regulatory requirements for the calculation and reporting of costs by these distribution agents, in particular as a result of the implementation of Directive 2014/65/EU (Markets in Financial Instruments Directive - "MiFID2 Directive") from January 3, 2018.

# Fund Management's Comment: DWS Top Dividende

Equity Funds - Global

Data in relation to the fund or the leading unit class.	June 2025	As at 30/06/2025
---	-----------	------------------

## Performance Review

Global stock markets continued their gains from the previous month in June amidst some indices even reached new highs. Artificial intelligence also returned to the focus of investors and led the risk-on rally of global equities. Monetary policy also provided some tailwinds for the markets, with a further interest rate cut by the European Central Bank and rising market expectations for imminent interest rate cuts by the US Fed. The new US administration's trade policy so far has had no significant impact on inflation yet and the US labor market remains strong. The geopolitical environment, however, remained tense with the escalation of the Israel-Iran conflict. Although, the military conflict caused oil prices to spike initially, prices fell below pre-escalation levels following the announcement of a ceasefire. The US Dollar continued its weakness, declining -2.47% in June (measured by the USD index). Especially, the Euro gained against the greenback (+3.88%). Noteworthy, copper and iron ore performed well in June, being up +7.49% and +2.56%, respectively.

In June, the strongest sectors were Information Technology and Communication Services, while Consumer Staples and Real Estate underperformed. Our defensive strategy DWS Top Dividende underperformed the broad equity market (MSCI World-Index: no official benchmark, for comparison purpose only). During June, the DWS Top Dividende was down -2.31%.

## Performance Attribution

Top 5 single stock contributions came from TSMC, Shell, NXP, Total Energy and Bank of America.

TSMC and NXP: Performance was in-line with the strong performance of the semiconductor sector.  
Shell and Total Energy: the companies benefitted from rising oil prices in reaction to the escalation of the Israel-Iran conflict.

Bottom 5: On a single stock level Nestle, Deutsche Telekom, Progressive, WEC Energy, and Enbridge lagged during the month.

Nestle and Deutsche Telekom: Performance lagged as broader defensive names underperformed in a risk-on market environment.  
Progressive: Indications of new policy business slowing down was weighing on the stock.

On a sector level, Information Technology contributed positively to the overall performance of the fund, while Financials and Consumer Staples contributed negatively.

## Current Positioning

No major portfolio changes were implemented in the past month. The portfolio management team increased a few existing positions across the Energy, Materials, and Utilities sector. Currently, companies of the Financials and Health Care sector have the highest weighting in the fund of roughly 20 and 13 percent, respectively, followed by equities from the sectors Materials and Energy. The fund has the lowest weightings in the sectors Consumer Discretionary and Communication Services. There were hardly any changes on the country level in the past months: US equities still represent the largest stake with about 30 percent, followed by a high proportion in France and Germany. The number of stocks currently stands at around 65. The investment level is currently around 80 percent.

## Outlook

The economic outlook for this year remains uncertain given the mixed feedback from macroeconomic data. Personal consumption trends remain healthy and supportive for economic growth which is backed by strong data from the labor market. In contrast, data on corporate investment levels and manufacturing activity show a more muted picture. The mixed economic landscape creates a difficult setup for central banks to adequately calibrate the level of policy rates. We expect less interest cuts going forward compared to twelve months ago since the economy is holding up better than expected at the time. Earnings growth continued to be in the high-single digit territory for global equity indices throughout the past year. However, this has been dominated by the U.S. - especially by a few large technology companies. We expect the trend of positive earnings growth to continue but to broaden across sectors and themes. While the investment theme of Artificial Intelligence should remain front and center, valuations for broad global equity indices, which are dominated by US companies, have priced in a decent amount of optimism. Equity markets outside of the United States offer lower valuation levels and accordingly a more meaningful dividend return. Higher valuations confirm our expectation of more moderate equity returns over the medium to long term. We consequently remain valuation conscious in our stock selection and emphasize the focus on sound balance sheets, high free cash flow and dividend sustainability. Further, we strongly believe that the importance of dividend distributions for the total return increases further and expect the contribution of dividends to the return of the investment to be above historic averages.

### Opportunities

In accordance with the investment policy.

### Risks

- The fund invests in equities. Equities are subject to strong price fluctuations and thus also to the risk of price decreases.
- The fund seeks to generate income from dividends, i.e. from expected distributions per equity. If a company distributes a smaller dividend than expected or no dividend at all, this can have a negative impact on the value of equities or derivatives.
- The fund may also invest in assets that are not denominated in euro. This can result in your investment falling in value if the euro exchange rate against these currencies increases.
- Due to its composition/the techniques used by the Fund management, the investment fund has elevated volatility, i.e. the share price may be subject to significant fluctuations up or down within short periods of time. The share value may fall below the purchase price at which the customer acquired the share at any time.

Important note on the investor profile:

Investor profile: Growth-oriented

The sub-fund is designed for growth-oriented investors who wish to achieve capital appreciation primarily through equity gains and exchange rate movements. Expected earnings are offset by high equity, interest rate and currency risks as well as creditworthiness risks and the possibility of heavy losses of the invested capital, up to the total amount invested. The investor is willing and able to bear such a financial loss, and does not prioritize capital preservation.

The Company provides additional information relating to the profile of the typical investor or target customer group for this financial product to distribution agents and distribution partners. If the investor is advised on the acquisition of units by the Company's distribution agents or distribution partners, or if they act as brokers in the purchase of units, they may also provide the investor additional information that also relates to the profile of the typical investor.

Supplementary information on the target market and product costs resulting from the implementation of the MiFID2 Directive and made available to distribution agents by the capital management company can be obtained in electronic form from the Company's website at [www.dws.com](http://www.dws.com).

## Important Notice

When the custodian sets the price on the last trading day of the month there can be a difference of up to ten hours between the times at which the fund price and the benchmark are calculated. In the event of strong market movements during this period, this may result in the over- or understatement of the Fund's performance relative to the benchmark at the end of the month (this is referred to as the "pricing effect").

DWS Investment GmbH, 2025

## Alpha

A measure of the difference between the risk-adjusted return on an investment and a benchmark. The alpha measures the part of the performance that cannot be explained by market movements or market risk, but rather is derived from the selection of securities within the market. Alpha is a way of measuring the active contribution to performance made by the portfolio manager. It is also a good yardstick to use when comparing several funds. The figure is calculated on a 3-yearly basis.

## Average dividend yield

Measures the average dividend amount, based on the current share price. This figure is calculated based on the shares (including ADRs/GDRs - > Depositary receipts) and REITs contained in a fund.

## Average market capitalization

Measures the average market capitalization of the shares, REITs and ADRs/GDRs (depositary receipts) contained in a fund. The market capitalization represents the total market value of a company as determined by multiplying the number of shares issued by the current share price.

## Beta factor

A measure of sensitivity - given as the average percentage change in the price of a fund when the market (benchmark) rises or falls by 1%. A value over (under) 1 means that on average the fund exhibits more (less) volatility than the benchmark. The figure is calculated on a 3-yearly basis.

## Correlation coefficient

Describes the degree to which two values (fund versus benchmark) move in the same direction. The value of the correlation coefficient is between -1 and +1. A correlation of +1 means that the fund generally moves in the same direction as the benchmark, while -1 indicates that the fund generally moves in the opposite direction. A correlation of 0 means that there is no relation between the price movements of the fund and the benchmark. The figure is calculated on a 3-yearly basis.

## Coupon

The coupon is the portfolio's average weighted coupon.

## Duration (in years/in months)

A measure of the sensitivity of an investment to changes in interest rates. Duration, which was developed by Frederick Macaulay, is the average period for which invested capital is committed. Because of the interest payable over time on the invested capital, duration is shorter than -> maturity. This version of duration is used in DWS Top Reporting and refers to invested assets (without "Cash and other holdings").

## Information ratio

The information ratio measures the difference between the annualized average return of the fund and that of the benchmark, divided by the Tracking error. The higher this value is, the more the investor compensated for the risk in the fund. The figure is calculated on a 3-yearly basis.

## Maximum drawdown

The maximum drawdown is the largest percentage drop in value in a given period of time. It measures the amount the fund falls from its highest point to its lowest point in the selected timeframe. The figure is calculated on a 3-yearly basis.

## Modified duration (in years/in months)

Serves as a measure of interest-rate sensitivity. Modified duration indicates the percentage change in price of a bond (in a portfolio) when the market interest rate changes by 1%. In order to calculate the percentage change in the bond price, the modified duration of the bond is multiplied by the percentage change in the interest rate. This figure helps investors assess the risks and opportunities of a bond at a glance.

## Sharpe ratio

A measure of risk developed by William F. Sharpe, defined as the excess return on an investment over that of a risk-free investment in relation to the risk of the investment. The higher the Sharpe ratio, the higher the return the investor receives for the risk the investment carries (expressed in volatility). The Sharpe ratio can be used to compare multiple funds. The figure is calculated on a 3-yearly basis.

## Tracking error

The tracking error is the standard deviation of the yield differential between a fund and its benchmark. This makes it a measure of how well the fund manager tracks the benchmark. The figure is calculated on a 3-yearly basis.

## VaR (Value at Risk)

A measure of risk that indicates the maximum fund losses with a given probability for a given period of time (holding period). VaR is calculated on the basis of the daily prices of the individual securities contained in the portfolio for a year.

## Weighted Average Life

The weighted average life of the times of the principal repayments of a liability, i.e. a bond. Refers to invested fund assets (without "Cash and other holdings").

## Yield

The yield is the annual return on a capital investment, measured as the actual interest earned (effective yield) on the capital invested. It is based on the fund's income (e.g., interest, dividends, realized capital gains) and change in the price of the assets held in the fund. The yield of a fund is

derived from the invested assets (without "Cash and other holdings") and is presented as a "gross" figure, i.e., before the deduction of total expenses/fee.

## Volatility

Volatility expresses the degree to which the yield on an investment (the price performance of a fund, for example) varies from a mean value in a specific period of time. This makes it a measure of fund risk. The greater the variation from the mean, the higher the volatility. Knowing the volatility allows investors to assess how uncertain the return potential of an investment is. The figure is calculated on a 3-yearly basis.
